

Chironjeet Das Joy

<https://chironjeetjoy.github.io/>

H-6, R-6, Niketon, Gulshan 1, Dhaka, Bangladesh

+8801601624292

Research Focus

Robot Control, Joints, Sensory Infusion, Embedded System and Dexterous Manipulation.

Education

BRAC University, Dhaka, Bangladesh

July 2020- October 2024

Bachelor of Science in Electrical and Electronic Engineering

Specialization: Electronics (With focus on Robotics and Intelligent System)

CGPA: 3.6/4.0

Publications

T. Mahmud*, T. U. Wara, and **C. D. Joy**, *Risk Factor Identification and Classification of Malnutrition Among Under-Five Children in Bangladesh: Machine Learning and Statistical Approach*. (Under Review at Heliyon).

A. H. Kafi, **C. D. Joy**, P. M. Golpa, and R. S. I. Antara, "Optimizing soybean production with ground sensor terminal-based monitoring system," in 74th International Astronautical Congress (IAC), Baku, Azerbaijan, Oct. 2-6, 2023

FYDP/Capstone Project

7 DoF Robotic Arm Solution for Automated Medicine Inventory Control with Dr. Abu S.M. Mohsin

- **Project Lead:** Led the development of a low-cost robotic arm with seven degrees of freedom for an automated medicine shelving, stacking, and retrieval system.
- Designed the system using stereovision cameras for enhanced spatial awareness and 12-bit absolute magnetic encoders for precise motion control, aimed at reducing drug misplacement errors and improving accuracy in pharmaceutical environments.

Research Experience

Laboratory of Space System Engineering & Technology - LASSET with Abdulla Hil Kafi & Raihana Shams Islam Antara

January 2023 - Present

Worked on *Satellite Ground Sensory Terminal Project* as the lead system designer & second author and *RAVEN* as the lead researcher and first author.

- Developed and implemented a time series data collection system for the *Satellite Ground Sensory Terminal Project*, utilizing multiple sensory inputs to monitor crop fields in rural areas via the KITSUNE Satellite. Designed a compact and easily deployable system, contributing significantly to project ideation and execution.
- **Raven:** Inspired by real-world problems with drone stabilization in complex aerodynamics during rescue scenarios, an Inertial Measurement Unit on the flight controller provides data about the drone cartesian position. Despite using regular PID controller, a Neural Network approach might lead to better stabilization. (*Ongoing*)
- Currently building a controlled room with infrared tracking camera completely built from scratch to simulate complex aerodynamics and to take 3D position of the drone for comparing to the IMU data.

Control & Application Research Center with Dr. A.K.M. Abdul Malek Azad

July 2022 - January 2023

Worked on Developing *Solar Powered DC Compressor & High Voltage Switching*.

- **Solar Powered DC Compressor:** Developed an experimental fridge with a DC compressor and Solar panel with graduate students.
- **High Voltage Switching:** Designed a high-voltage switching system using solid-state relays for multipurpose applications in collaboration with graduate students

Grad Course and Other Projects	EEE383 Electronic System Design with Abdulla Hil Kafi	Fall 2023
	<ul style="list-style-type: none"> Partnered with five undergraduate students and worked on a NANO Satellite designing project to collect data from multiple ground station to send back the data to a centralized ground control system. Designed and implemented the payload and communication subsystem. 	
	EEE383 EMBEDDED SYSTEM DESIGN with Nahid Hossain Taz	Summer 2023
	<ul style="list-style-type: none"> Developed a secure lock system using ATmega32 microcontroller, integrated with remote control functionality for enhanced accessibility. The system included real-time control, secure authentication protocols, and low-power operation, ensuring reliability and efficiency in both residential and commercial applications 	
	Flying Raijin	
	<ul style="list-style-type: none"> Developed a STM32 based FPV drone equipped with custom stereo-vision camera built from scratch. The drone achieved ~150 km/h in 0 to 2 second (as verified by the on-board GPS module) 	
	Epileptic Seizure Detection and Classification Using Machine Learning Algorithms	
	<ul style="list-style-type: none"> Developed and implemented a machine learning framework to classify three stages of epileptic seizures (normal, pre-seizure, and seizure) using EEG signals from the Physionet dataset, with a focus on leveraging transfer learning in YOLOv8 for superior accuracy. 	
Awards	LASSET Research Grant (RAVEN)– 2024	
	LASSET Research Grant (RAVEN)– 2023	
	BRACU Student Assistant Fund – 2021	
	BRACU Student Assistant Fund – 2020	
	Dean's List (Spring 2021, Spring 2022, Spring 2023, Fall 2023) – Awarded for academic excellence across multiple terms	
Community Involvement	LASSET, Outreach Team Lead	March 2023 to Present
	BARCU EEE Club, Mentor	February 2021 - April 2023
	BARCU Computer Club, Mentor	February 2021 - May2022
	University Student Parliament, General Secretary	May 2020 to Present
